

HTML Practical Tasks

1. Introduction to HTML

Task 1: Create a Basic HTML Document

- Create an HTML document with the following structure:
 - `<!DOCTYPE html>`
 - `<html>`
 - `<head>`
 - `<title>`: Set the title to "My First HTML Page"
 - `<body>`
 - Add a heading (`<h1>`) with the text "Welcome to My Website"
 - Add a paragraph (`<p>`) with some introductory text
 - `</body>`
 - `</html>`

Task 2: Block and Inline Elements

- Create an HTML document with examples of block-level and inline elements:
 - Block-level elements: `<div>`, `<h1>`, `<p>`, `<ul>`, `<li>`
 - Inline elements: `<span>`, `<a>`, `<strong>`, `<em>`
 - Nest a list (`<ul>` with `<li>`) within another list

Task 3: Personal Biography Page

- Create a personal biography page with the following sections:
 - Name, photo, and a short biography
 - List of hobbies or interests (nested list)
 - Contact information with hyperlinks for email and social media profiles

2. Anchor & Image, Marquee Tag

Task 4: Hyperlinks and Images

- Create an HTML document with the following:
 - Multiple hyperlinks (`<a>`) to different websites, including internal and external links
 - An internal link that navigates to a specific section within the same page
 - Add images (`<img>`) with appropriate `src` attributes for online and offline images

Task 5: Deprecated Tags

- Create an HTML document using the `<marquee>` and `<font>` tags to demonstrate their attributes

- Include scrolling text with the `<marquee>` tag
- Style text using the `<font>` tag (note the tags are deprecated)

Task 6: Image and Internal Links

- Create a webpage with an image gallery:
 - Use multiple `<img>` tags to display images
 - Each image should link to a larger version of the image or another related page

3. Forms & Tables

Task 7: Registration Form

- Create a registration form with the following fields:
 - Name, Email, Password, Confirm Password
 - Gender (radio buttons)
 - Hobbies (checkboxes)
 - Country (dropdown menu)
 - Submit button

Task 8: Table Creation

- Create a table to display data:
 - Use `<table>`, `<tr>`, `<td>`, and `<th>` tags
 - Include headers for "Name", "Age", "Email"
 - Populate the table with sample data

4. Introduction to HTML5

Task 9: HTML5 Semantic Elements

- Create a web page using HTML5 semantic elements:
 - Include `<header>`, `<nav>`, `<article>`, `<section>`, `<aside>`, and `<footer>`
 - Structure a blog post layout with these elements

CSS Practical Tasks

1. Introduction to CSS & Text Properties

Task 10: Applying CSS

- Create an HTML document and style it using CSS:
 - Use inline CSS to style text
 - Create an internal stylesheet in the `<head>` section
 - Link to an external stylesheet

Task 11: Text Styling

- Style the text properties of an HTML document:
 - Change the font-family, font-size, and color
 - Use custom fonts by linking to an external font service like Google Fonts

2. Box Model and Box Properties

Task 12: Box Model Design

- Create an HTML document and design a box using CSS:
 - Apply padding, border, and margin
 - Demonstrate how each property affects the element's layout

3. Background Properties

Task 13: Background Styling

- Apply background colors, gradients, and images to HTML elements:
 - Create a gradient background for a section
 - Add a background image to a div

Task 14: Scrolling Background Effect

- Create a webpage with a scrolling background effect:
 - Use CSS to fix the background image and demonstrate the effect

4. Display and Float Properties

Task 15: Chessboard Layout

- Use the float property to create a chessboard layout:
 - Create a container div with child divs representing chessboard squares
 - Style the squares to alternate colors and float them to achieve the layout

5. Position, Transform, Hover & Transition Properties

Task 16: Positioning Elements

- Position elements using CSS positioning properties:
 - Create a layout with static, relative, absolute, and fixed positioned elements

Task 17: Hover Effects and Transitions

- Create hover effects for buttons and icons:
 - Use CSS transitions to animate the hover effects

6. Flex Properties

Task 18: Flexbox Layout

- Create a responsive layout using CSS Flexbox:
 - Design a flexible navigation bar with flex properties

- Create a multi-column layout that adapts to different screen sizes

Basic Level Practical

Task 1: Create a Simple Webpage Layout

Objective: Create a webpage with a header, navigation bar, main content area, and footer.

Definitions:

- **HTML (HyperText Markup Language):** The standard markup language for creating web pages. It describes the structure of a webpage.
- **CSS (Cascading Style Sheets):** A style sheet language used for describing the presentation of a document written in HTML. It controls the layout of multiple web pages all at once.

Task 2: Style a Button

Objective: Create and style a button with hover effects.

Definitions:

- **Button Element:** An interactive element that users can click.
- **Hover Effect:** A CSS effect that changes the appearance of an element when the mouse pointer hovers over it.

Task 3: Build a Responsive Grid Layout

Objective: Create a responsive grid layout using CSS Grid.

Definitions:

- **Responsive Design:** An approach to web design that makes web pages render well on a variety of devices and window or screen sizes.
- **CSS Grid:** A layout system in CSS that allows for the creation of complex web layouts easily and consistently.

Task 4: Create a Form with Styling

Objective: Design a user registration form with styled input fields and buttons.

Definitions:

- **Form Element:** An HTML element used to collect user input.

- **Input Field:** A field where users can enter data.
- **Form Styling:** The process of using CSS to make forms visually appealing and user-friendly.

Task 5: Implement a Navigation Bar

Objective: Create a navigation bar with styled links.

Definitions:

- **Navigation Bar** A section of a website intended for site navigation, typically placed at the top or side of a webpage.
- **Link Styling:** The use of CSS to style anchor (`<a>`) elements, which are used to create hyperlinks.

Task 6: Add a Background Image

Objective: Set a background image for a webpage and apply styling.

Definitions:

- **Background Image:** An image set as the background of an element using CSS.
- **CSS Background Properties:** Properties used to control the background of an element, such as `background-image`, `background-size`, and `background-position`.

Task 7: Create a Card Component

Objective: Design a card component with an image, title, description, and button.

Definitions:

- **Card Component:** A UI component that groups related information in a flexible and extensible container.
- **Component Styling:** The use of CSS to style reusable UI components consistently.

Task 8: Implement a Flexbox Layout

Objective: Use CSS Flexbox to create a flexible layout with multiple columns.

Definitions:

- **Flexbox:** A one-dimensional layout method in CSS for laying out items in rows or columns.
- **Flex Container:** An element with `display: flex` that enables flexbox layout for its children.

Task 9: Create a Dropdown Menu

Objective: Design a dropdown menu with CSS.

Definitions:

- **Dropdown Menu:** A list of options that appears when a user interacts with a button or text.
- **CSS Positioning:** The use of CSS properties like `position`, `top`, `left`, `z-index` to control the layout and stacking order of elements.

Task 10: Add Animations

Objective: Implement a simple CSS animation on a webpage element.

Definitions:

- **CSS Animation:** A feature that allows the animation of HTML elements without using JavaScript or Flash.
- **Keyframes:** The CSS at-rule `@keyframes` controls the intermediate steps in a CSS animation sequence.

• Practical Task

Practical Task: Personal Portfolio Website

Objective: Create a personal portfolio website that showcases your skills, projects, and contact information using HTML and CSS.

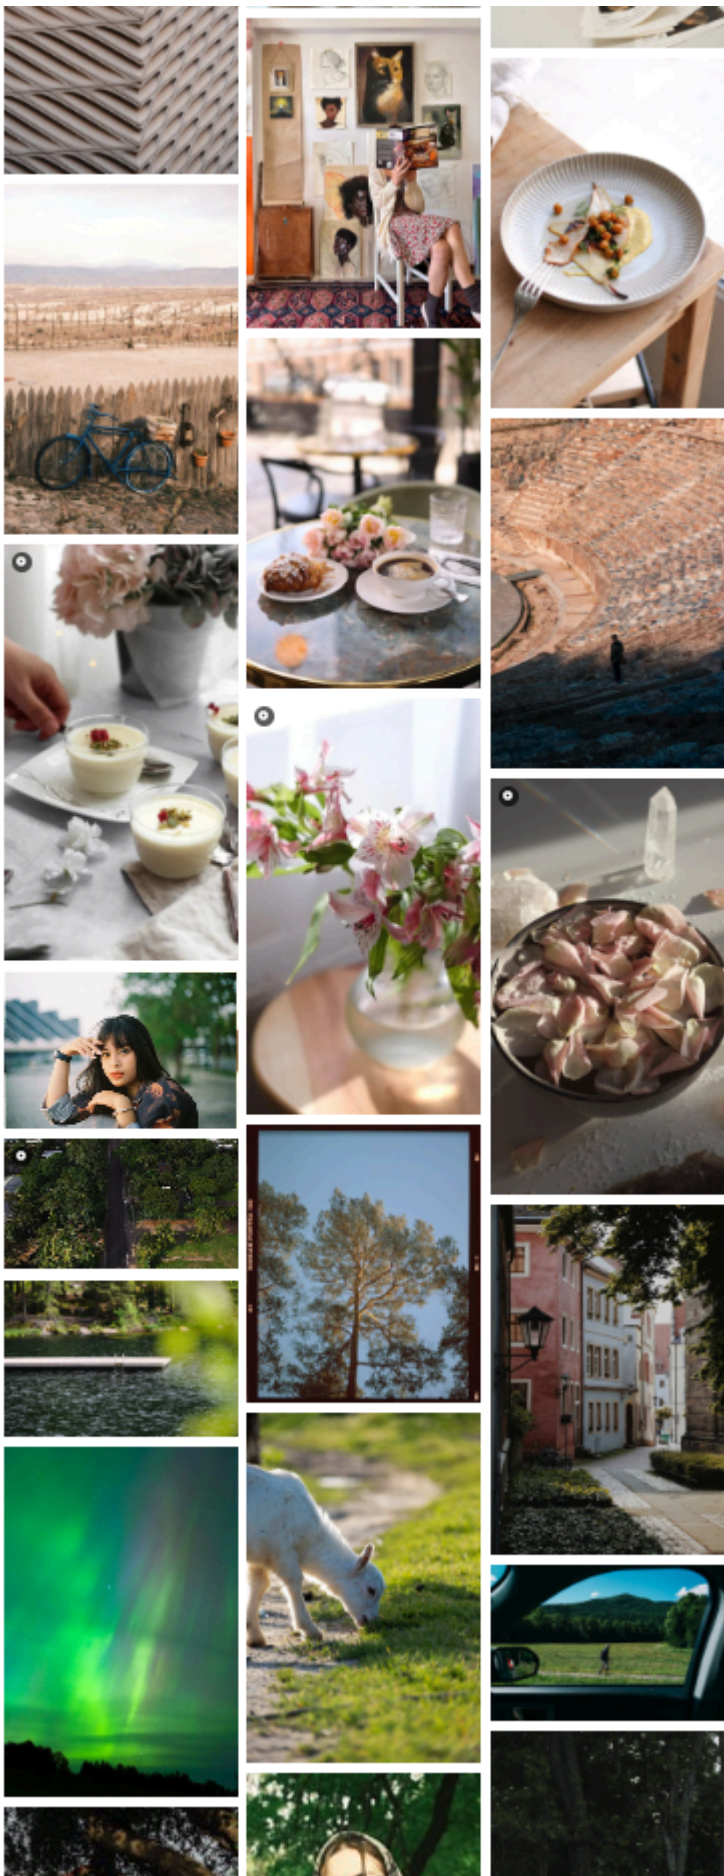

Description: In this practical task, you will build a complete personal portfolio website. This project will help you apply various HTML and CSS concepts, including page structure, forms, tables, semantic elements, styling, positioning, and responsive design.

Practical Task: Registration Form with HTML Validation

Objective: Create a user registration form with validation using HTML and CSS.

Description: In this practical task, you will build a registration form that includes fields for name, email, password, and confirm password. You will apply CSS to style the form and use basic HTML5 validation to ensure proper input. This project will help you understand form elements, attributes, and the application of CSS for form styling.

Practical Task: Responsive Photo Gallery Like this.

Objective: Create a responsive photo gallery using HTML and CSS Flexbox.

Description: In this practical task, you will create a photo gallery that adjusts its layout based on the screen size. You will use HTML to structure the gallery and CSS Flexbox for the layout. This project will enhance your understanding of responsive design and the use of Flexbox for creating flexible layouts.

Practical Task: Product Listing Table

Objective: Create a product listing table with styled headers and alternating row colors using HTML and CSS.

Description: In this practical task, you will build a product listing table that includes columns for product name, description, price, and availability. You will use CSS to style the table headers, add alternating row colors, and highlight the table borders. This project will help you practice structuring data with HTML tables and styling them with CSS.

Practical Task: Multi-Section Blog Page

Objective: Create a multi-section blog page using HTML5 semantic elements and CSS.

Description: In this practical task, you will create a blog page that includes a header, navigation bar, main content area with articles, and a footer. You will use HTML5 semantic elements like `<header>`, `<nav>`, `<article>`, and `<footer>`. CSS will be used to style the page and ensure a consistent layout. This project will help you understand the use of semantic HTML and CSS for page styling.

Practical Task: Interactive Navigation Bar

Objective: Create an interactive navigation bar with dropdown menus using HTML and CSS.

Description: In this practical task, you will build a navigation bar that includes links to different sections of a website. You will add dropdown menus to some of the links for additional navigation options. CSS will be used to style the navigation bar and add hover effects to the dropdown menus. This project will help you practice creating interactive elements and applying CSS for enhanced user experience.
